

Complete listing of claims:

1-67. (cancelled)

68. (new) A composition comprising a highly soluble salt form of sertraline selected from the group consisting of sertraline acetate, sertraline aspartate, and sertraline lactate and an amount of a solubilizing agent sufficient to produce a concentration of dissolved sertraline in a use environment containing chloride ions which is 1.5 times higher than the concentration effected by a comparative composition of matter identical thereto but for the inclusion of said solubilizing agent; and wherein said solubilizing agent is selected from the group consisting of an organic acid, a partial glyceride, a glyceride and a calcium salt.

69. (new) The composition of claim 68 wherein said organic acid is selected from the group consisting of D,L-malic acid, maleic acid, tartaric acid, tannic acid, acotinic acid, succinic acid, glycine, sorbic acid, adipic acid, erythorbic acid, itaconic acid, citric acid, ascorbic acid, aspartic acid, glutamic acid, and lactic acid.

70. (new) The composition of claim 69 wherein said organic acid is selected from the group consisting of adipic acid, erythorbic acid, itaconic acid, citric acid, ascorbic acid, aspartic acid, glutamic acid, and lactic acid.

71. (new) The composition of claim 69 further comprising another solubilizing agent that is a salt of an organic acid.

72. (new) The composition of claim 69 further comprising another solubilizing agent that is non-ionic.

73. (new) The composition of claim 1 wherein said partial glyceride is selected from the group consisting of glyceryl monooleate, glyceryl monostearate, glyceryl monolaurate, glyceryl dilaurate, and C8-C10 partial glycerides.

74. (new) The composition of claim 1 wherein said calcium salt is a salt of an organic acid.

75. (new) The composition of claim 1 wherein said calcium salt is selected from the group consisting of calcium carbonate, calcium acetate, calcium ascorbate, calcium citrate, calcium gluconate monohydrate, calcium lactobionate, calcium gluceptate, calcium levulinate, calcium pantothenate, calcium propionate, calcium phosphate dibasic, and calcium saccharate.

76. (new) The composition of claim 1 wherein said use environment containing chloride ions is 0.075 M sodium chloride.

77. (new) The composition of claim 76 wherein said organic acid is selected from the group consisting of adipic acid, erythorbic acid, itaconic acid, citric acid, ascorbic acid, aspartic acid, glutamic acid, and lactic acid.

78. (new) The composition of claim 69 further comprising another solubilizing agent that is a calcium salt.

79. (new) A composition comprising a highly soluble salt form of sertraline and an amount of a solubilizing agent sufficient to produce a concentration of dissolved sertraline in 0.075 M sodium chloride which is 1.5 times higher than the concentration effected by a comparative composition of matter identical thereto but for the inclusion of said solubilizing agent; and wherein said solubilizing agent is selected from the group consisting of adipic acid, erythorbic acid, itaconic acid, citric acid, ascorbic acid, aspartic acid, glutamic acid, and lactic acid.
